Site

formulamobilecardetailing.com.au

Every claim below was verified against the live server. Findings that looked bad on first pass but tested clean are listed in **What's actually fine** so the pitch doesn't overreach.

EXECUTIVE SUMMARY

The site is a 2021–2022–era static build (Apache/PHP, Bootstrap 3, jQuery) that has been left untouched for roughly four years. The **hosting layer is in better shape than expected** — HTTP/2, TLS 1.3, gzip and a valid certificate are all live. The problems are in the build itself and in what the site *doesn't do*.

Three things matter commercially:

- 1. **The site is quietly broken.** Four CSS/JS files referenced on every page return 404, jQuery is loaded twice on the homepage in a way that breaks Bootstrap's JavaScript, and the contact-page map points at the middle of the Indian Ocean instead of Melbourne.
- 2. **It is close to invisible to local search.** No structured data, no canonical tags, no suburb pages, and an H1 that never once says "car detailing" or "Melbourne". For a *mobile* detailer whose entire market is geographic, this is the single largest missed opportunity.
- 3. **There is a lead flow — but it is working against itself.** A real enquiry form exists on `/contact`, with reCAPTCHA correctly wired and firing. The problem is how it's positioned: it sits on one page only, the copy above it invites *feedback* rather than a booking, and it captures no service and no vehicle, so nothing that arrives can be quoted without a call back. Add no pricing and no booking option, and a customer who is ready to buy is given no obvious way to do it.

The underlying content is genuinely good — the service descriptions have real technical depth. This is a presentation, findability and conversion problem, not a "start from nothing" problem.

1. BROKEN IN PRODUCTION CRITICAL

#	FINDING	IMPACT
1.1	Four referenced files 404 on every page: <code>snavvy.css</code> , <code>assets/css/style.css</code> , <code>assets/css/media.css</code> , <code>js/core.js</code> . <code>js/core.js</code> is script-tagged on all six pages.	Styling and behaviour the original developer wrote are simply absent. Every page load fires four failed requests. Whatever <code>core.js</code> did, it has not run since the files went missing.

#	FINDING	IMPACT
1.2	jQuery is loaded twice on the homepage. All pages load jQuery 1.12.4 from <code>ajax.googleapis.com</code> ; the homepage then loads jQuery 3.2.1 locally <i>after</i> <code>bootstrap.min.js</code> . The second load replaces <code>window.jQuery</code> , orphaning every plugin bound to the first.	Bootstrap's JS components on the homepage are bound to a jQuery instance that no longer exists. Silent, intermittent breakage — the classic "sometimes the menu doesn't work" bug.
1.3	~15 further images 404 , referenced from inside CSS: <code>assets/images/patterns/overlay1-10.png</code> , <code>blank.gif</code> , <code>camera-loader.gif</code> , <code>images/call-sec.jpg</code> , <code>images/arroww-select.png</code> .	Slider overlays and loading states never render. The slider has no loading indicator.
1.4	The contact-page Google Map does not show the business. The embed is centred on <code>-21.19, 95.47</code> — open ocean west of Australia — at country-level zoom, with the place name literally set to "Australia". (Locale params <code>1sen!2snp</code> suggest it was never localised past the offshore build.)	A visitor on the Contact page trying to confirm the business is local sees a map of the entire continent. Actively erodes trust.
1.5	The Facebook icon links to <code>https://www.facebook.com/</code> — Facebook's own homepage, not a business page.	Every social click is a dead-end and a lost visitor.

2. PERFORMANCE HIGH

Server config is fine; the payload is not.

#	FINDING	DETAIL
2.1	No cache policy on static assets.	<code>Cache-Control</code> , <code>Expires</code> and <code>ETag</code> are all absent. Only <code>Last-Modified</code> is sent. Every repeat visitor re-validates every asset instead of serving from cache — on a 6.5 MB site that is the difference between an instant second visit and another full round-trip set. Lowest-effort, highest-return fix on the list.
2.2	5.56 MB of raster images across 41 files.	Largest single image 563 KB. The four slider JPGs alone total ~1.8 MB and load on the homepage.
2.3	No modern image formats, no responsive sizing, no lazy loading.	All JPEG/PNG. No WebP/AVIF, no <code>srcset</code> , no <code>loading="lazy"</code> . Mobile visitors download desktop-resolution images over mobile data — the exact audience a <i>mobile</i> detailing service is chasing.
2.4	~448 KB of CSS + JS across 16 files (250 KB CSS, 198 KB JS).	Includes a full Bootstrap 3 build, Modernizr, Camera slider, WOW.js, Animate.css and SimpleLightbox for what is a six-page brochure site.

#	FINDING	DETAIL
2.5	TTFB ~675 ms on the homepage.	Slow for a static-content response. Suggests shared hosting with no caching layer.

3. SECURITY HIGH

#	FINDING	DETAIL
3.1	No security headers at all.	Strict-Transport-Security, Content-Security-Policy, X-Content-Type-Options, X-Frame-Options, Referrer-Policy and Permissions-Policy are all absent. The site can be framed for clickjacking and offers no transport-security guarantee.
3.2	The <code>www</code> redirect drops to plaintext mid-chain.	<code>https://www...</code> → <code>http://</code> (unencrypted) → <code>https://</code> . Every <code>www</code> visitor makes one cleartext hop, exposed to interception on hostile networks. Compounded by 3.1 — with no HSTS there is nothing to stop the downgrade. One-line Apache fix.
3.3	jQuery 1.12.4 (2016) and 3.2.1 (2017).	Both predate 3.5.0, which fixed the <code>jQuery.htmlPrefilter</code> XSS flaws (CVE-2020-11022 / CVE-2020-11023).
3.4	Bootstrap 3.3.7 — end-of-life since July 2019.	Carries known XSS issues in <code>data-*</code> attribute handling (CVE-2018-14041 and related). No security patches will ever be issued.

4. SEO & DISCOVERABILITY HIGH

This is where the largest commercial upside sits.

#	FINDING	IMPACT
4.1	No structured data anywhere. No <code>LocalBusiness</code> , <code>Service</code> , <code>Review</code> , <code>AggregateRating</code> or <code>FAQ</code> schema.	The business is ineligible for review stars, service listings and rich results in Google. For a local service business this is the most valuable schema on the web, and none of it is implemented.
4.2	No suburb or service-area pages. The entire geographic footprint is the string "Metropolitan Melbourne".	Every "car detailing [suburb]" search — the highest-intent, highest-converting query class for a mobile operator — has nothing to rank. The service is mobile; the site is not built to prove it.

#	FINDING	IMPACT
4.3	No canonical tags on any page.	Nothing consolidates duplicate URL variants (<code>www /non-www</code> , <code>/services</code> vs <code>/services?modal=ceramic</code>).
4.4	The declared canonical contradicts the server. <code>og:url</code> and every <code>sitemap.xml</code> entry point at <code>www.</code> , but <code>www.</code> 301-redirects to non- <code>www</code> .	The site tells Google its canonical home is a URL that redirects away. Split, self-contradicting signals.
4.5	Homepage has four identical H1s, all reading <code>Let UsTake Care of your Car</code> — note the missing space.	Four H1s dilute the signal, and the one heading Google weights most heavily contains neither "detailing" nor "Melbourne".
4.6	Services page H1 is just "Our Services".	No keyword, no geography, on the most commercially important page.
4.7	Sitemap is stale and thin. All <code>lastmod</code> dates are <code>2022-05-09</code> ; generated by a free online generator.	Signals an abandoned site.
4.8	Six pages total, no blog or content layer. Nine images have empty <code>alt</code> ; four <code>alt</code> texts read "detailing".	Almost no surface area to rank for anything beyond the brand name.

5. CONVERSION & CONTENT HIGH

#	FINDING	IMPACT
5.1	No pricing anywhere on the site.	High-intent visitors comparing detailers leave to find someone who publishes numbers.
5.2	The site's only lead form is introduced as a feedback form. The copy directly above it reads, verbatim: <i>"If you have some feedback please fill the form."</i>	This is the entire lead-capture mechanism on the site, and it is labelled as the one thing that isn't a sale. A visitor ready to book has no signal that this is where to ask. The highest-intent visitors are the ones most likely to skip it.
5.3	One form, on one page. <code>/contact</code> is the only page on the site with a form. The homepage, all six service descriptions, the gallery and the franchising page have none.	Every enquiry has to survive a navigation step to convert. The services page — where intent peaks — offers "Read More" eight times and "Contact Us" twice.

#	FINDING	IMPACT
5.4	The form captures no service and no vehicle. Fields are First Name, Last Name, Address, Phone, E-mail, Comments. Nothing identifies what the customer wants or what they drive.	Nothing that arrives can be quoted or scheduled without a call back, so every lead costs an extra round trip. Meanwhile a full street address is demanded at first touch, before any value has been exchanged.
5.5	No client-side validation, and no labels at all. All fields are plain <code>type="text"</code> — no <code>required</code> , no <code>type="email"</code> , no <code>type="tel"</code> . There are zero <code><label></code> elements ; all six fields rely on placeholders alone. Posts to <code>/response</code> .	Malformed and incomplete submissions with no inline feedback. Placeholders vanish the moment someone types, so anyone who pauses loses the prompt, and screen readers handle them poorly. Where these enquiries are delivered is unverified — confirm before any migration, or leads will drop silently.
5.6	No online booking and no quote flow. The strings "Book Now", "Get a Quote" and "Request a Quote" appear nowhere on the site.	No capture outside business hours, and no self-service path for customers who would rather not phone.
5.7	Footer contradicts itself. "Our support available to help you 24 hours a day, seven days a week" sits directly above "Monday-friday: 6:30am to 6:30 pm / Saturday: 6:30am to 6:30 pm / Sunday: Closed ".	Visible, unresolved contradiction in the site furniture on every page.
5.8	Copyright reads 2021.	Five years stale on every page. The clearest possible "this business may not still be trading" signal.
5.9	Three static testimonials, no live reviews. No Google Reviews integration, no star ratings, no schema. One contains the typo "Highly Recomend".	Social proof is unverifiable and frozen. Competitors surfacing live Google ratings win the comparison by default.
5.10	Gallery is eight images with no before/after pairing.	Paint correction and overspray removal are inherently before/after services. The single most persuasive asset this business could show, and it isn't shown.

WHAT'S ACTUALLY FINE

Worth knowing so the pitch stays credible — these were tested and passed:

- **HTTP/2 and TLS 1.3** both negotiate correctly via ALPN.
- **gzip compression is enabled** on HTML and CSS (homepage 14.5 KB → 3.9 KB on the wire).

- **Valid Let's Encrypt certificate**, current through 24 Sep 2026, auto-renewing.
- **All six pages are valid UTF-8** — no encoding corruption.
- **viewport meta is present** and there are ~25 media queries, so a responsive foundation exists.
- **Google Analytics 4 is installed and current** (`G-ZKYL0YQ0QZ`).
- **The contact form is live and functional**. It renders, reCAPTCHA v2 is correctly wired and firing, and it posts to a real server-side handler. The lead path exists — section 5 is about how it's positioned and what it captures, not about building one from scratch.
- **All 76 images carry an alt attribute** (9 are empty, but the attribute is there).
- **Per-page meta titles and descriptions are unique** and reasonably written.
- **The service content has real technical depth** — Mini/Full/Interior/Exterior detail, overspray removal, Graphene Pro 10H N1, Quartz 9H Pro, glass and interior coatings, and 3/4/5/6-stage paint correction. This is strong raw material and should carry across to the rebuild.
- **A second business line already exists** — the franchising page.

SCOPE IMPLIED BY THE ABOVE

Grouped by how the work would realistically be sold.

Stabilise — resolve the four 404s, fix the double-jQuery conflict, correct the map embed, fix the Facebook link, update the copyright, resolve the hours contradiction, fix the two typos.

Harden & accelerate — add cache headers, add the security header set, fix the plaintext redirect hop, upgrade jQuery and move off end-of-life Bootstrap 3, compress and convert the 5.56 MB image library, add lazy loading and responsive sizing.

Make it findable — `LocalBusiness` / `Service` / `Review` / `FAQ` schema, canonical tags, reconcile the `www` canonical conflict, rewrite the heading hierarchy for keyword and geographic intent, build out suburb-level service-area pages, regenerate the sitemap.

Make it sell — the biggest wins here are cheap. Reframe the existing form from "feedback" to a quote request, add service and vehicle fields so enquiries arrive quotable, put a capture point on the service pages instead of only on `/contact`, and add real labels and validation. Then: publish pricing or price ranges, add an online booking option, *confirm where the form delivers*, integrate live Google Reviews, and rebuild the gallery around before/after pairs.

Recover from the host first — `response.php`, the `.php` page sources and `.htaccess` are not reachable over HTTP and must come off the cPanel/FTP account before anything is migrated. See the README.
