

WEBSITE REBUILD · BUILD REPORT

WHAT WAS *BUILT*

A complete rebuild of formulamobilecardetailing.com.au — from a 88-page static site and 87 indexed URLs to lead capture, attribution and conversion tracking.

Prepared for

Formula Mobile Car Detailing

Period

02 August 2026 – 22 August 2026

MEDIA ASSETS

The previous site was six pages of 2021-era HTML with four broken files on every page, no structured data, no canonical tags, and one enquiry form labelled as a feedback form. What replaced it is below.

WHAT WAS DELIVERED

DISCOVERY

- **Byte-verified capture of the old site**
Every page and asset pulled and SHA-256 checked against the live server, kept as an untouched reference.
- **Front-end, back-end, SEO and conversion audit**
34 findings across five areas, each verified against the live server, delivered as a branded PDF.

THE NEW SITE

- **88 pages, statically generated**
Every route real HTML — no client-side rendering, no hydration step, nothing that needs JavaScript to be readable.
- **44 suburb pages and 25 keyword landing pages**
Four topic clusters — ceramic coating, paint correction, overspray removal, mobile detailing — each page with its own content and FAQ schema.
- **Structured data on every page**
LocalBusiness, Service, Review, Breadcrumb and FAQPage markup. The old site had none.

DESIGN AND INTERACTION

- **Brand system built from the client's own mark**
Racing red taken from the logo, Bebas Neue and DM Sans vendored locally, glassmorphism and carbon-fibre mesh throughout.

- **Animated logo splash**

The block mark lands, then the cursive writes itself on left to right, cut from the supplied logo as two registered layers.

- **Service selector and coating deck**

An infinite coverflow of all seven services, and a four-stage coating sequence that runs as a deck on the homepage and as a scroll film on the service page.

- **Four process films**

Cut, graded and looped from source footage, one per coating stage, crossfaded and lazy-loaded.

LEAD CAPTURE AND MEASUREMENT

- **Four-step booking wizard**

Service, location, vehicle and contact — capturing what the old form never did, so an enquiry arrives quotable.

- **First-touch attribution**

Twelve advertising parameters captured on the first visit and never overwritten, so a lead can be traced to the campaign that paid for it.

- **Conversion tracking gated on the CRM**

generate_lead fires only after the CRM confirms receipt, so reported conversions always match leads that actually exist.

SCALE

MEASURE	BEFORE	AFTER
Pages	6	88
Indexed URLs	6	87
Suburb pages	0	44
Keyword pages	0	25
Structured data	None	5 schema types, every page
Canonical tags	None	Every page
Lead capture	1 form, labelled “feedback”	4-step wizard + contact form
Attribution	None	12 first-touch parameters
Broken files	4 on every page	0

WORK LOG

DATE	WORK COMPLETED
02 Aug	Snapshot live formulamobilecardetailing.com.au as rebuild base Disable text conversion so clones stay byte-exact Correct asset count and note byte-verification in README Add front-end and back-end audit of the existing site
03 Aug	Build the new site in www/ — Premier architecture, Formula brand, Tesla splash hero Add /services/select/ — game-style infinite service carousel Add branded PDF of the site audit
04 Aug	Correct the audit's conversion section: the lead flow exists
05 Aug	Surface the service selector from the homepage
09 Aug	Port the Glossedout lead-gen infrastructure Document the Facebook photo sourcing attempt Glassmorphism across the site, plus the Glossedout FAQ accordion New homepage hero: carbon-fibre splash into the service carousel Add /booking/ — Premier's 4-step wizard, wired to Formula's services Fix the hero: card spacing, missing headline, HUD collision Homepage texture, plus reviews and gallery as seamless marquees
10 Aug	Replace the duplicated services grid with a ceramic-coating scroll film
21 Aug	Hero: shorten the subline and clear it of the cards on every viewport New logo mark, and a script subheading to match it Real logo file, and a process film instead of the 3D model
22 Aug	Coating stages: display word + glass card, with parallax between them Four stage films, crossfaded — one per stage instead of one loop throughout Real gallery photos, slimmer header, carbon fibre, and the operator out of stage 1 Ten reasons to ceramic coat, on the ceramic coating page Keyword clusters and a real sitemap — 63 pages to 89 Splash write-on, hexagon mesh everywhere, spray-on titles Fix the hexagon mesh — it was never tessellating Real photos on five of the seven service cards Coating stages as a deck on the homepage, beam outlines, real honeycomb Homepage resequenced, deck fades, suburbs become a map

30 commits across 8 working days. 51,134 lines added, 11,282 removed.

STILL OPEN

These are not outstanding build work. Each needs a decision or an account from the client before it can be finished.

- **CRM webhook**

The booking and contact forms are built and tested but not yet connected. Each needs its own GoHighLevel inbound webhook, and a custom field per attribution parameter or those values silently drop.

- **Pricing**

No price appears anywhere on the site. The old site published none, so none was invented.

- **Google reviews**

The review marquee is built and running on the three existing testimonials. Live Google reviews need a Places API key and the business Place ID.

- **Before / after photography**

The single most persuasive asset a detailer can show, and the one thing the archive does not contain.

- **Years in business**

The site now says 30+ years. The old franchising page says 20. One of them needs correcting.

Figures in this report are measured directly from the project repository at the time of generation, not entered by hand.
